

## ***CULVERT POLICY***

It is the policy of Montgomery County Precinct #1 to install driveway culverts for the residents of Precinct #1. In order for driveway culverts to be installed, the following conditions must be met:

1. The driveway location must be on a county maintained road in Precinct #1.
2. Culverts must be purchased by the property owner and delivered to the driveway location. County will provide enough materials to make passable for lot owners. Contractors & builders must provide cover for pipes. **(We will not reset culverts when disturbed by contractors)**
3. Culverts may be concrete, corrugated metal, heavy wall steel or plastic pipe designed for drainage. **(We will not set fiberglass culverts)** County will size pipe.
4. The location of desired pipe placement must be staked on each end by the property owner.
5. Precinct #1 will install a **maximum of 24'** of pipe. If additional pipe is desired, it must be provided and installed by owner. Montgomery County required that clean-outs (surface grates) be installed in any pipe run of 40" or more. Clean-outs must be installed at a maximum of 40' intervals.
6. Driveways and driveway culverts, and the maintenance thereof are the responsibility of the property owner. Repair or replacement of culverts may be arranged with Precinct #1 subject to the conditions above.
7. When property owner requests a 1 day notice call, we will set culvert at our convenience.

The placement of driveway culverts is performed by Precinct #1 as a convenience to residents to allow access to their property. Placement of culverts for landscaping, beautification or other esthetic reasons is the sole responsibility of the owner.

Damaged or deteriorated pipe will not be installed.

Placement of any culvert on county property must be approved by Montgomery County prior to installation.
